

## The Party Reservation (Farhaty)

The idea of my project will be used for reservation of halls for different types of events.

So this web application is considered important to the people who will use it as will as save time and effort for both customers and owners of halls and will provide the opportunity for the owners of the halls to communicate easily with customers. Customers can book the hall through this system even when they are outside the country and does not have sufficient time to return to his own country and go to the halls personally and to look at them, he only has to open party reservation website and look through this system and see all the features located in the halls and choose between them.

My web application has capability for the user to add evaluation and comments .

All the details of the halls can be managed by the owner's representative where he can add any information , advertisement and any social media tools to market his business regarding his hall .

Each customer should create his account to access the information of the halls and to link to the payment type .

Any guest can access this application for review without creating a new account .
